Matias Medina

Frontend Engineer

Chile matiasmg.dev@gmail.com linkedin.com/in/matiasmg github.com/matias-mg

Summary

Frontend engineer with 5 years of experience in React and TypeScript, specializing in design systems and form-heavy product UI. Most recently built the shared component library behind FloQast's company-wide rebrand, in an Nx monorepo used by all 14 engineering squads. Previously led a team of 5 frontend engineers at a fintech startup. Based in Chile, working remotely with US teams and flexible across all US time zones.

Work Experience

Career Break, Independent Projects 02/2026 – Present

- *Browser Writing Assistant:* Chrome extension that checks grammar offline with a WebAssembly linter and rewrites text with on-device AI, with the UI isolated in Shadow DOM.
- *League of Legends Companion:* Desktop app that reads the lobby from the game client's local API and applies a setup chosen from 164 character profiles.

FloQast (via FullStack Labs), Frontend Engineer 11/2024 – 01/2026 | Remote, US

React, TypeScript, Nx, micro-frontends, REST APIs, Storybook, Jest, Git, TanStack Table, OpenAI SDK

- Built 25 shared UI components (forms, multi-step wizards, tabs, buttons) with the compound-component pattern, each documented in Storybook and tested with Jest.
- Replaced all hard-coded CSS in the app with design tokens for a company-wide rebrand, working with designers, product owners and engineers across 14 squads.
- Connected new frontend features to the product's REST APIs.
- Set up Claude Code for the team (shared project context, MCP servers, custom skills) and used it to write components and tests.
- Fixed a production LLM agent that answered in the wrong locale about half the time by rewriting its system prompts and tuning the model and temperature (OpenAI SDK). No mismatches reported since.

Kandui.cl, React Engineer 01/2020 – 09/2023 | Santiago, Chile

Next.js, React, TypeScript, Redux, Django, REST APIs, styled-components

- Led the frontend team of 5 engineers: set the technical roadmap and built the design system, from Figma to React components.
- Designed and built the KYC onboarding forms with accessibility as a requirement. Completion went from 56% to 96% within a month of release.
- Migrated 82 class components to function components and custom hooks.
- Mentored junior engineers and enforced strict code reviews, improving team delivery speed.

Skills

Frontend: TypeScript, JavaScript, React, Next.js, Redux, styled-components, TanStack Table, HTML, CSS
UI Architecture: Design systems, component libraries, design tokens, micro-frontends, Nx monorepos, accessibility (a11y), internationalization (i18n)
Testing & Tooling: Jest, React Testing Library, integration tests, Playwright, Storybook, Vite, Webpack, CI/CD, Figma
Backend & AI: GraphQL, REST APIs, Node.js, Django (Python), Claude Code, Cursor, MCP servers, OpenAI SDK

Education

Duoc UC, Associate Degree in Software Engineering 2018 – 2021 | Santiago, Chile

Languages

English (C1), **Spanish** (native)
